

Plug-and-Play Diffusion Distillation

Yi-Ting Hsiao, Siavash Khodadadeh, Kevin Duarte, Wei-An Lin, Hui Qu, Mingi Kwon,
Ratheesh Kalarot

The IEEE/CVF Conference on Computer Vision and Pattern Recognition 2024

Methodology Overview

(a) Classifier free guidance

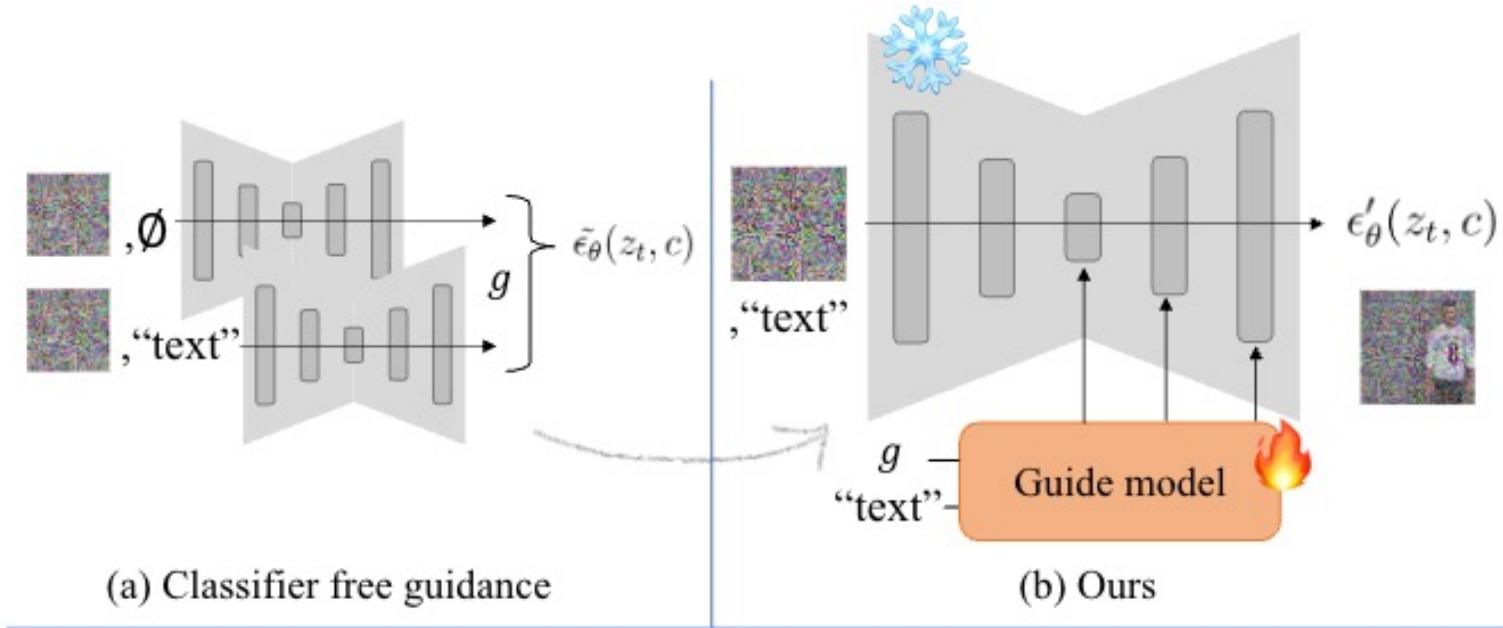

(b) Ours

(c) Sampling with various models

Methodology Overview

(a) Classifier free guidance

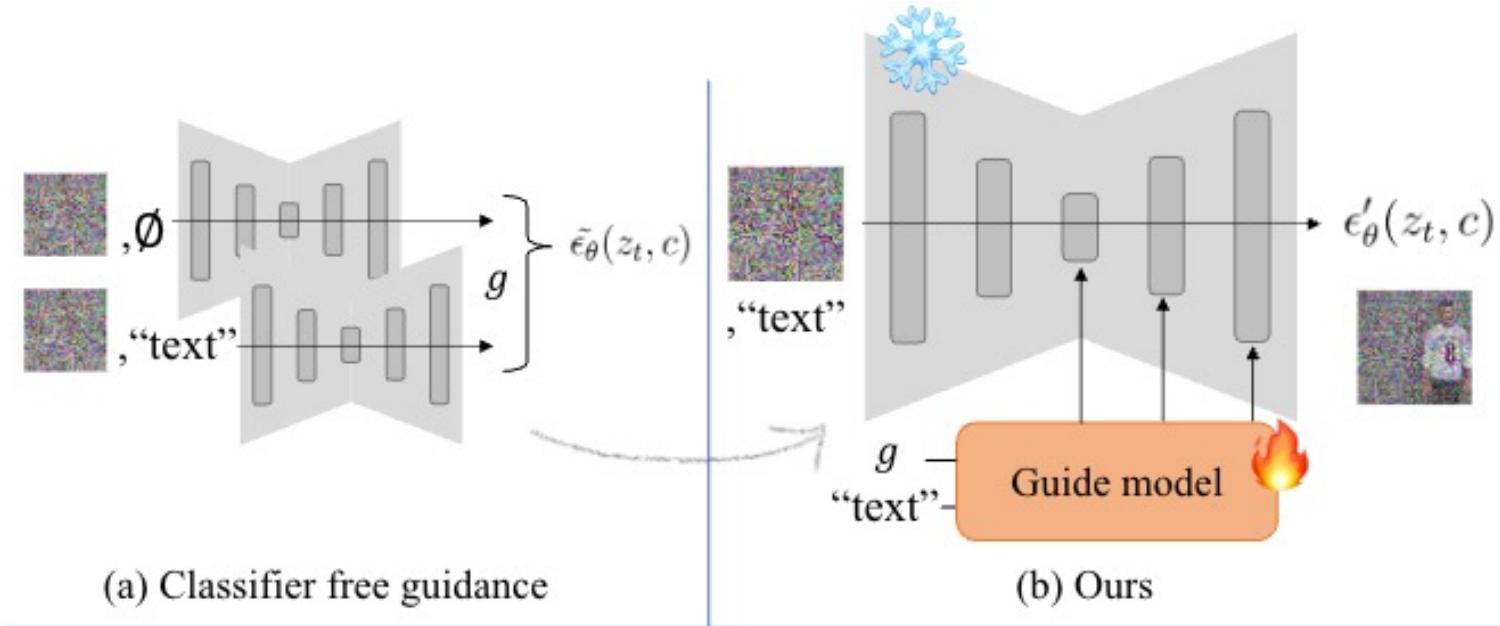

(b) Ours

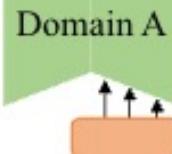

(c) Sampling with various models

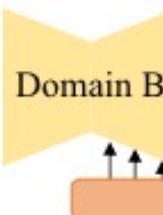

Methodology Overview

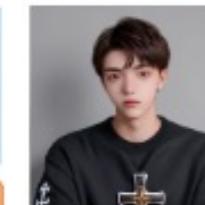

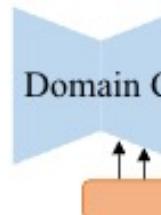

Domain A

Domain B

Domain C

(c) Sampling with various models

Diffusion model Distillation with ~51% FLOPs count decrease

51% decrease

Method	FLOPs (trillion)	# of Params (million)
Ours-full	T (338.7) + 116.5	T (859) + 361
Ours-tiny	T (338.7) + 7.79	T (859) + 8.27
Teacher × 2	677.5	859

Diffusion model Distillation with ~50% FLOPs count decrease

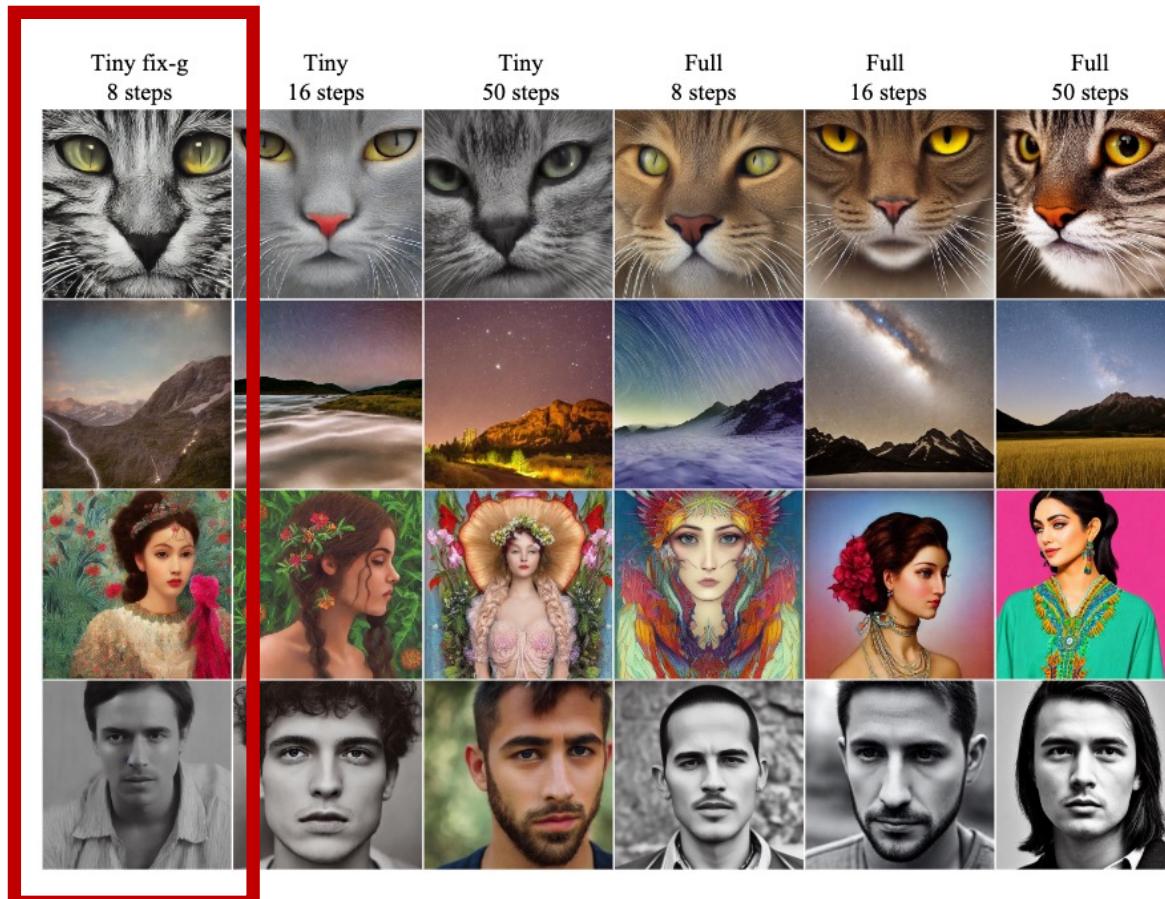

Figure 5. The results of the full guide model and tiny guide model under 8, 16, and 50 sampling steps.

The base model is untouched, so we can distill different fine-tuned model without retraining

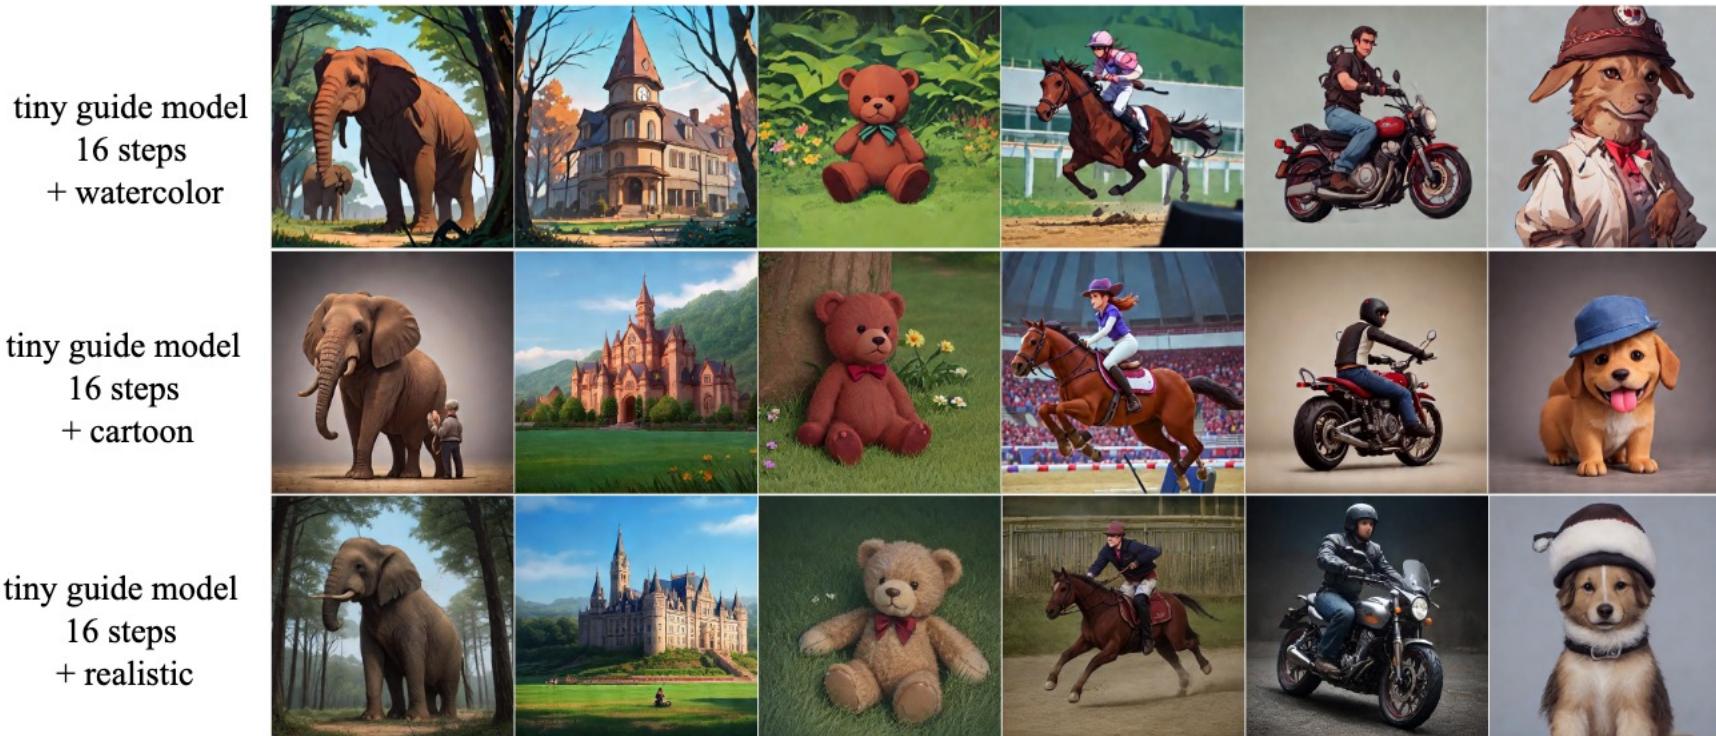

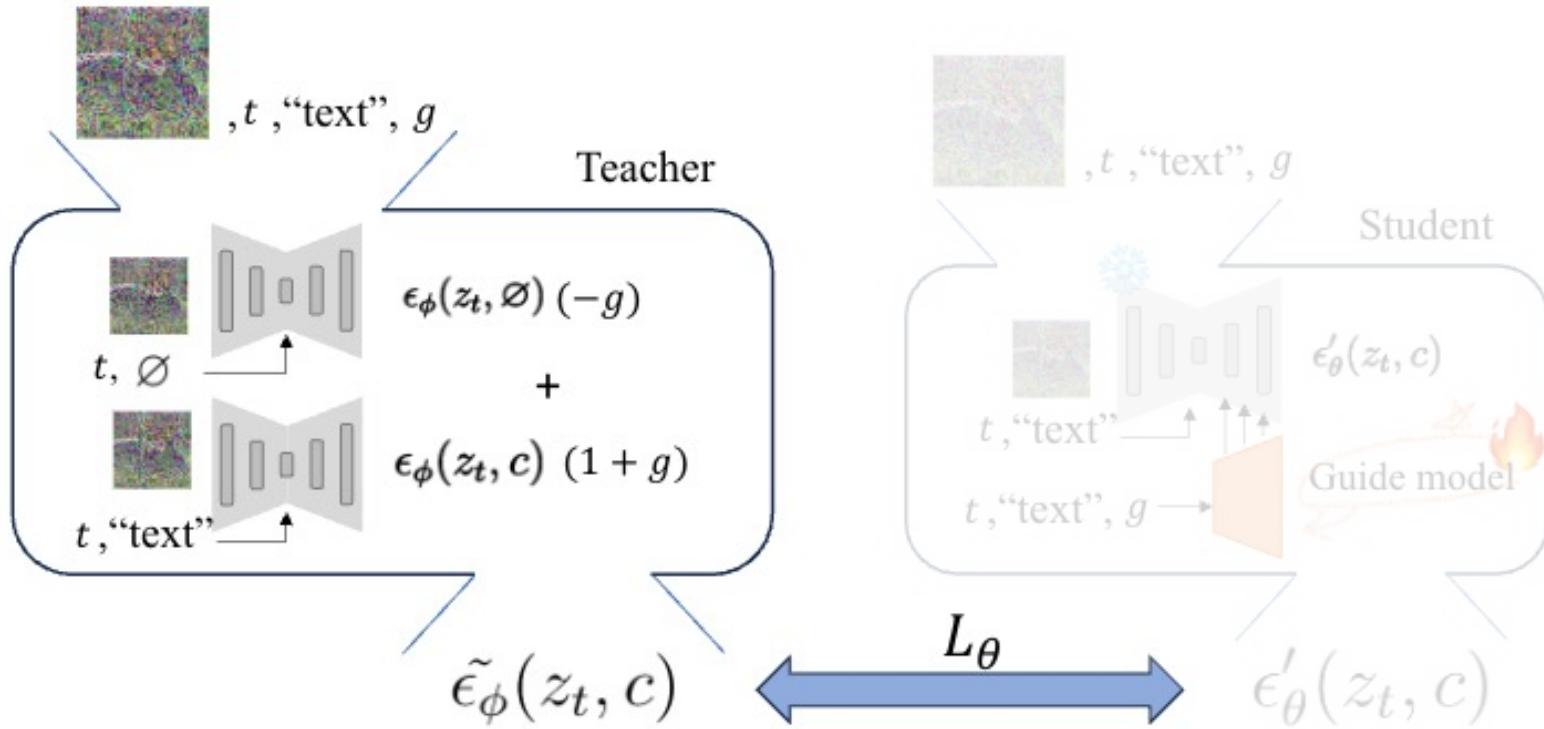

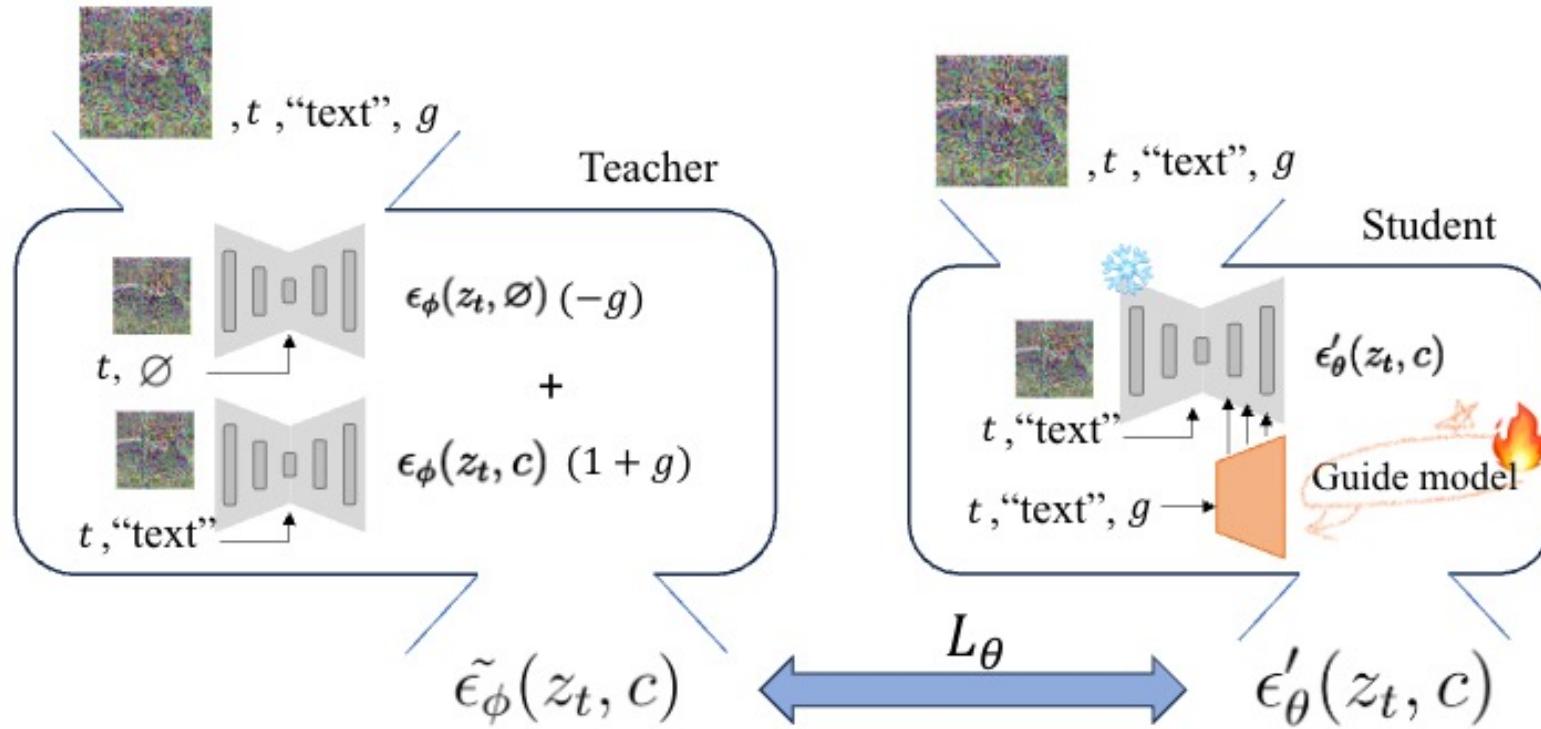

Figure 8. Plug in the tiny guide model with different fine-tuned U-Nets.

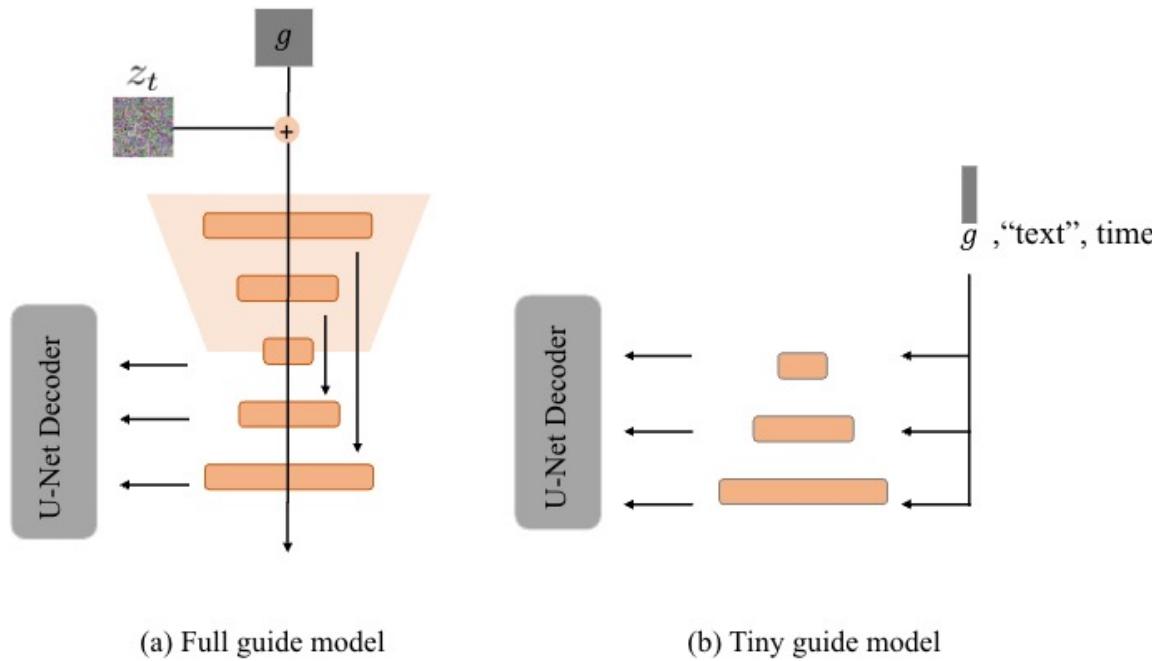

Stage 1 distillation: classifier-free guidance distillation

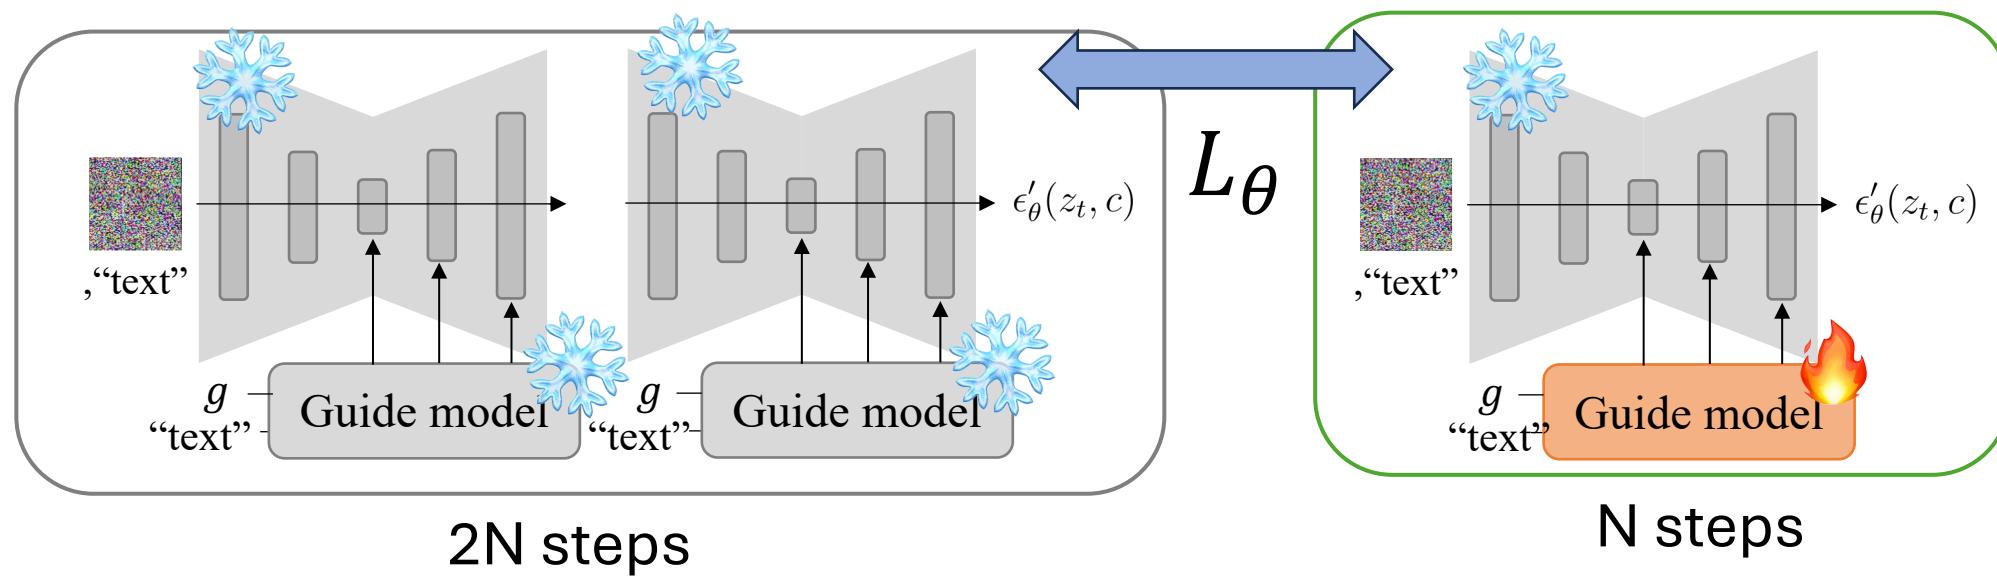

Stage 1 distillation: classifier-free guidance distillation

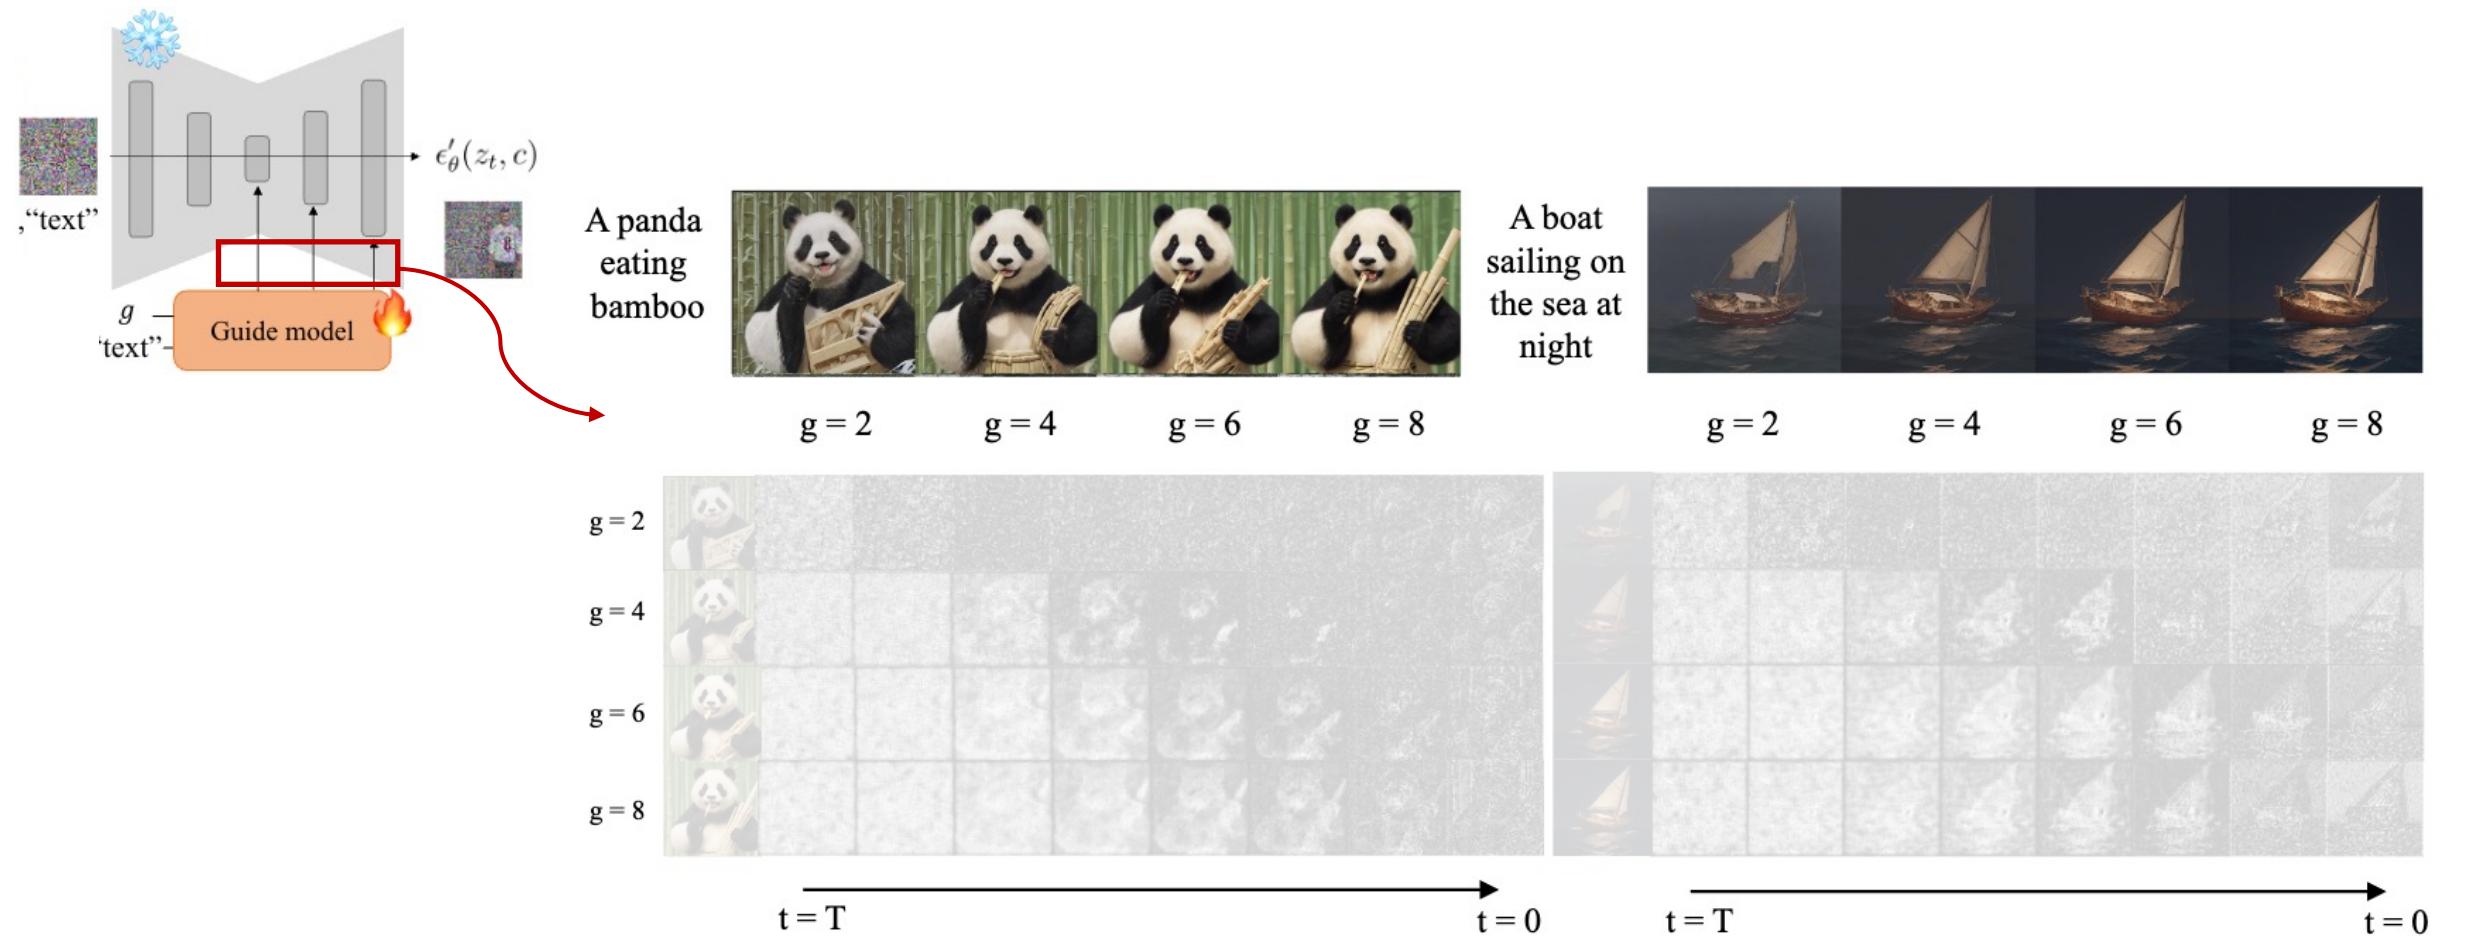

Tiny guide model is introduced to reduce the model size

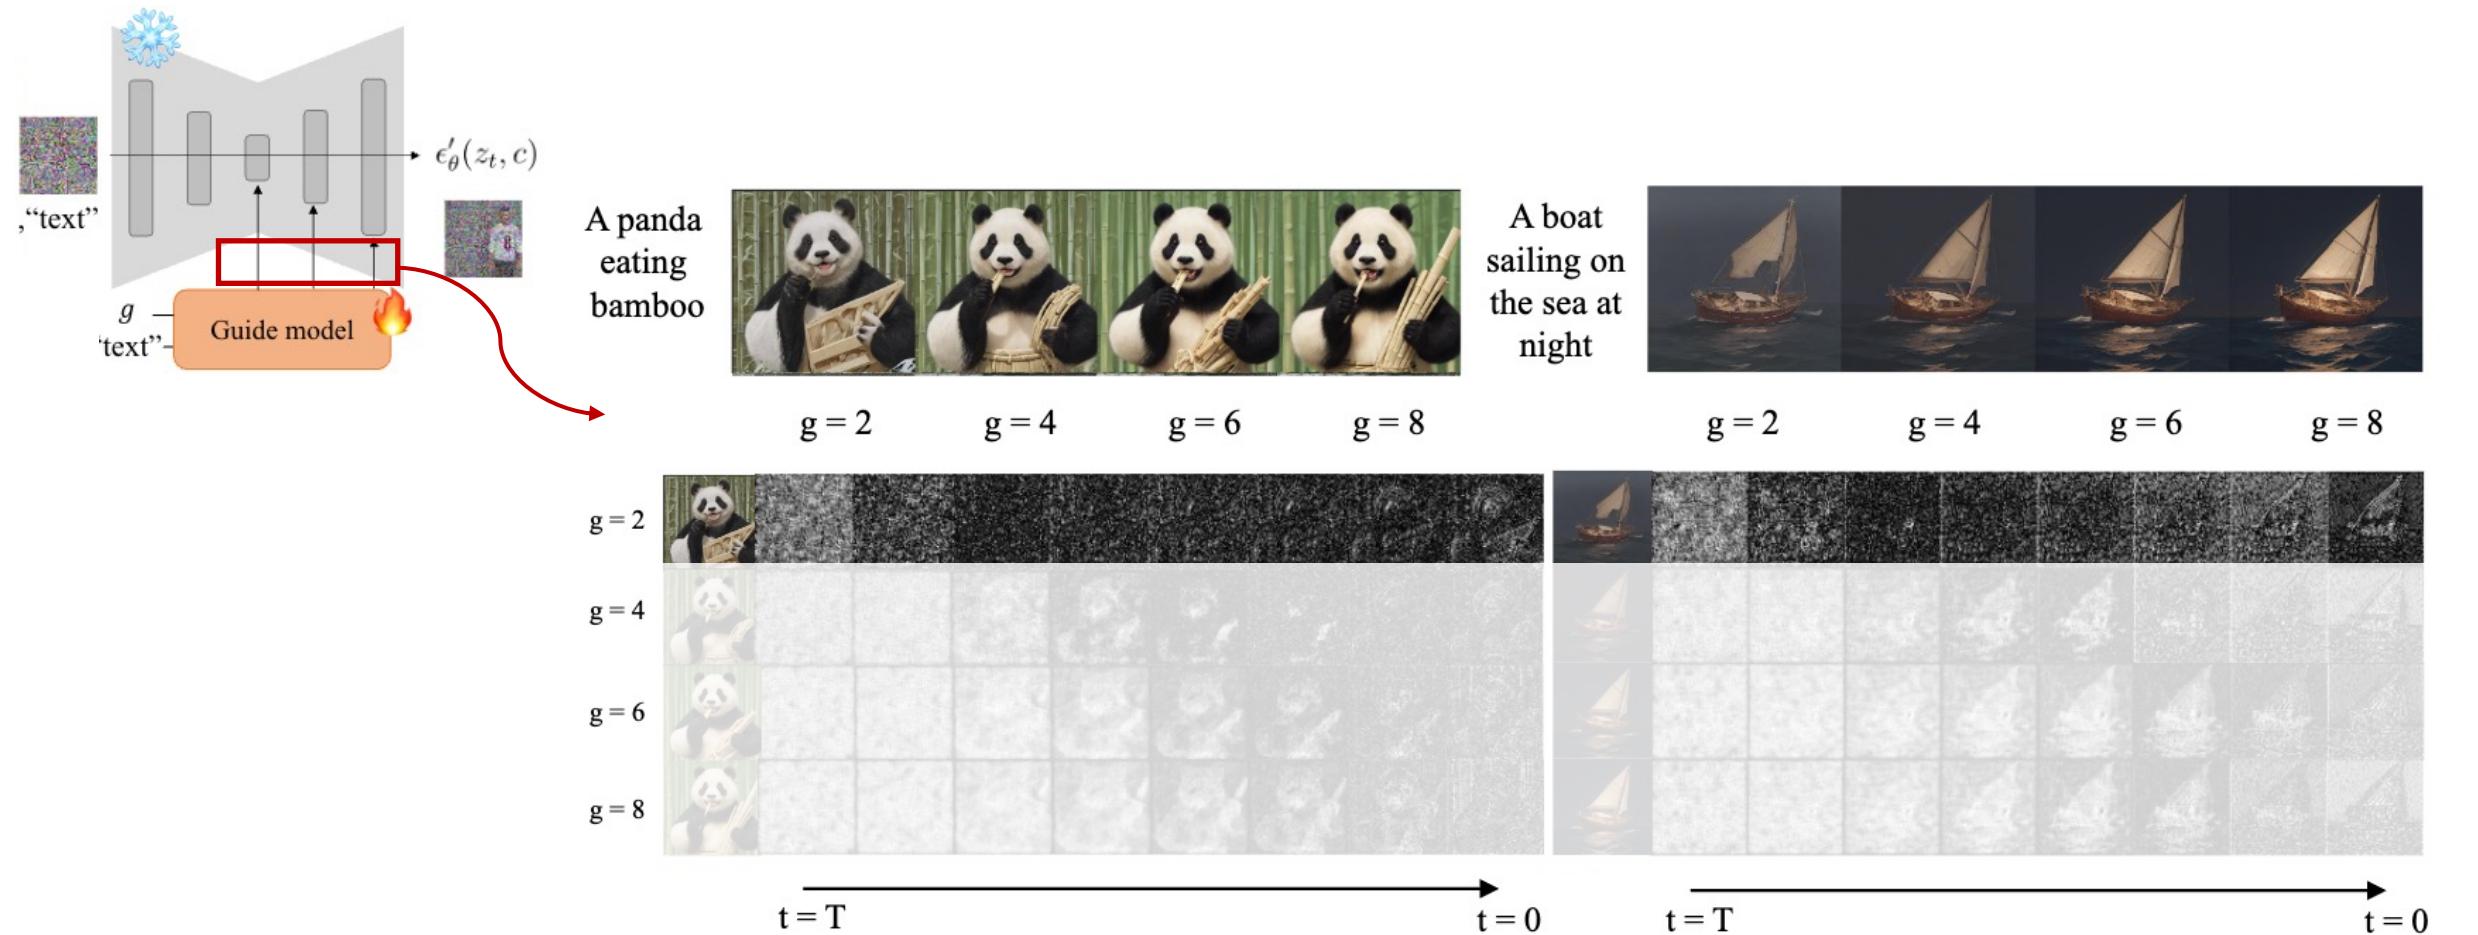

Stage 2 distillation: sampling step distillation
